Great Smile made by Orapix

Premier choice for both orthodontists and patients

# Speedy Treatment

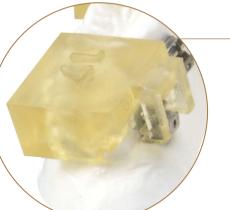

# Achieve perfection in treatment with shorter chair time!

For Orthodontists, improve profitability of dental practice with accurate and convenient treatment as well as increased patient turnover.

For Patients, save time and cost with satisfactory treatment results and reduced number of clinic visits.

### About Orapix Jig System

Orapix Jig System finds the optimal location for brackets by using the patient's virtual model and also produces transfer jigs that assist bracket bonding. With jigs, precise bonding of brackets is much easier and convenient.

Patient model up from Lab

Patient's dental model is picked up from RP/Dental Lab

Quick and accurate scanning of the model with fully automated 3D scanner

Precise bracket positioning with virtual set-up

"Save more time

Optimal orthodontic treatment starts with Orapix. Orapix introduces its leading next generation orthodontic treatment program–from fast and precise scan of dental models by fully automated 3D scanner to accurate dental analysis and comprehensive treatment planning with specialized 3D programs. Now, Orapix makes everyone smile–accurate and convenient treatment as well as shortened chair time for orthodontists, reduced treatment period and satisfactory results for patients.

Great news for Orthodontists!

# Speedy Treatment

# Precise Orthodontics

# Deedy Treatment

## Achieve perfection in treatment with shorter chair time!

For Orthodontists, improve profitability of dental practice with accurate and convenient treatment as well as increased patient turnover.

For Patients, save time and cost with satisfactory treatment results and reduced number of clinic visits.

# "Save more time. Smile more!"

- the 3Txer Program.
- High-precision jigs are produced with computerized procedure.
- In case of bracket failure, ijos can be easily produced again for rebonding.
- Made with high strength material, jigs are easy to store and to use in procedures.

About Orapix Jig System

Orapix Jig System finds the optimal location for brackets by

using the patient's virtual model and also produces transfer jigs

that assist bracket bonding.

With jigs, precise bonding of brackets is much easier and

convenient.

## **3D Program**

**3Dxer** Dental information can now be managed digitally

Not only is the data management convenient but the system is also useful for consultation with patients since the treatment progress can be viewed in 3D images.

Based on the prediction, plans for prompt and precise treatment can be developed for each stage and appliances to enhance treatment effect can also be produced.

## **Surgical Wafer**

Faster production of high-precision wafers with computer simulation

Simulated surgery can be conducted using 3D model and 3D CT images. Wafers are produced based on the simulation to minimize error in the actual procedure.

## **Orapix 3Dimensional Scanner** KOD-500

## Short scan time, simple operation, and high accuracy

Using innovative technology, Orapix's new 3D Scanner converts dental cast information into 3D data. With Oraix 3D Scanner, accurate procedure using precise scanning can be achieved along with convenient patient treatment.

## Advantages of Orapix Jig System

Optimal bracket position can be easily identified with

system for more accurate bracket bonding in comparison to manual performance of the

nvenient bracket nding using jigs tart orthodontic

Utmost patient satisfaction is achieved with precise and effective treatment
